

Water Conservation Devices [Printer-Friendly Version](#)

Lake Cochichewick is a valuable natural resource and we should do everything we can during this time of drought to protect it. Thus, the Town is making available to the public Water Conservation Kits at cost. These kits will include a toilet dam (to use less water in each flush), dye tablets for leak detection in the toilet, a low flow (1.5 gallons per minute (GPM)), dual-spray kitchen aerator, and two 1.0 GPM bathroom aerators from:

Niagara Conservation Corporation
45 Horsehill Road
Cedar Knoll, NJ 07927
(800) 831 8383
www.niagaraconservation.com

The kits will cost the consumer just \$4.21 each. The town will also donate a Water Conservation wheel explaining water conservation to your purchase for free.

This company also specializes in water efficiency toilets and shower heads and also sells individual water conservation devices.

Product catalogs can be seen on their website so that the homeowner can customize or add to their own package for their own individual needs.

Local stores such as Home Depot, Lowes or Ace Hardware do sell individual items such as low flow showerheads and toilets along with toilet dams and other individual water conservation devices.

These kits and information will be made available at the Department of Public Works, 384 Osgood Street – 978 685-0950, and at the Water Treatment Plant, 420 Great Pond Road – 978 688-9574.
